

### Log In

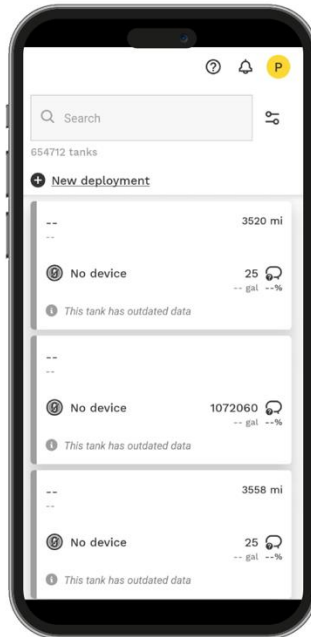

1

Start by logging in with your email and password credentials.

### Start

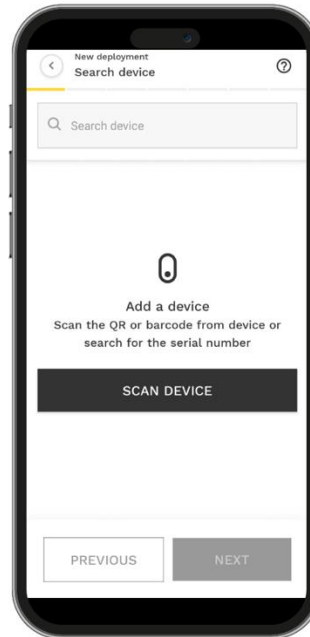

2

From the main menu, select the "New Deployment" option to begin the setup process.

### Find

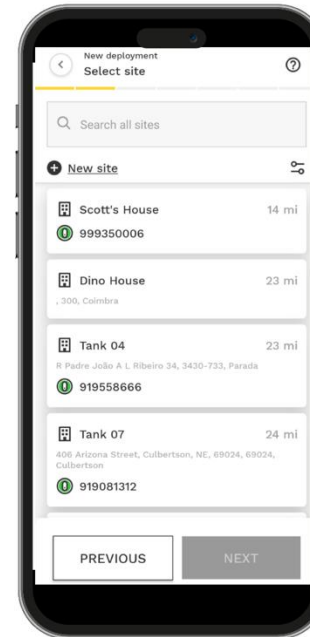

3

You can identify the device by manually entering its serial number or by scanning the QR code with your phone's camera. Once identified, select the corresponding unit.

### Assign

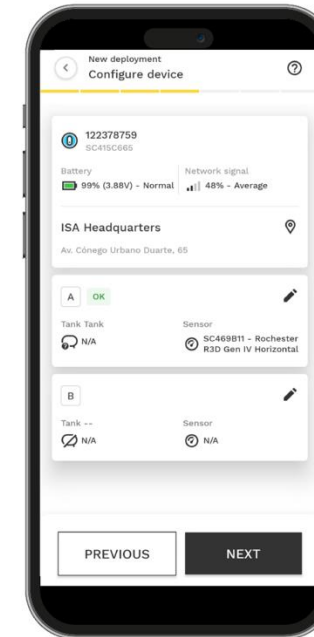

4

Select the site where the device will be installed. If the site is not listed, tap "New Site" and enter the location details. Ensure the information is accurate to facilitate future identification. Once completed, tap "Next".

### Configure

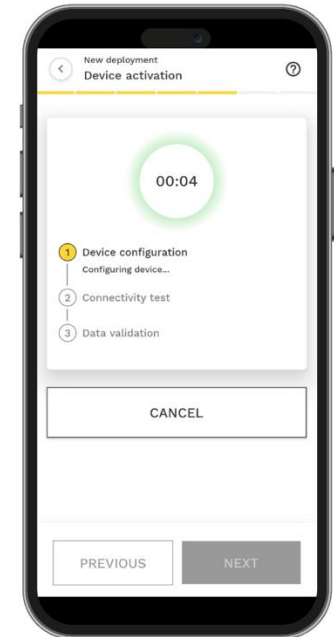

5

Tanks associated with the selected site will now be displayed. If necessary, tap "Add Tank" and provide the required information. Then, tap "Next". After that, select the channels to be used. If two channels are required, ensure both Channel A and Channel B are properly configured. After it's completion tap "Next".

### Test

6

You will be prompted to activate the device. When ready, tap "Continue" to begin the activation process. The system will automatically connect to the device and complete the activation. Once the process is successfully completed, tap "Next" to finalize the setup.
